

The System Prompt, Composed

One base “world-bible” prompt with two swappable slots. The mood and director the user picks are injected into those slots, the I/O contract is trimmed off, and the result becomes the shared voice every agent writes from.

PROMPTS/SCRIPT_GENERATOR.SYSTEM.MD

Base prompt — the composable skeleton

Authored once. The two dashed bands are injection slots; everything else is fixed craft.

You are a writer-director

Turn an ordinary moment into cinema, rooted in something true.

The mind making this film

Default: a versatile master. Replaced by the chosen director’s profile — the *voice*.

SLOT: DIRECTOR_PROFILE

Understand before you write

Find the human friction; build wants, fears, contradictions.

The mood of this film

Default: Maximum Drama. Replaced by the chosen mood — the *register* (authoritative).

SLOT: MOOD_DIRECTION

Director’s mind × film’s mood

Director = the *how*; mood = the *what kind of film*.

Give the small thing the weight of cinema

Scale comes from belief, not noise.

How the writing should land

Be specific · reveal through action · every scene turns.

Language

Descriptions in English · dialogue in Hindi-led Hinglish (Roman script).

The shape of the film & think in layers

Rising multi-scene arc; reason internally, output only the result.

compose_voice() cuts here & — “# What you receive” onward is dropped

I/O contract + JSON schema

Not shared — each agent appends its own role + schema.

PROMPTS/MOODS/ · PROMPTS/DIRECTORS/

Two libraries fill the slots

One short, affirmative block per file, swapped in by a line-anchored marker match.

If a slot is left unpicked, its **default text ships in the base** — so the prompt is always complete.

Shared voice context — the trimmed world-bible, injected **once**. Mood is authoritative over register · director leads the voice.

↓ each agent appends its own narrow role + output schema ↓

Architect

Builds the blueprint: title, tagline, logline, characters, scene plan.

Screenwriter

Writes the scenes & Hinglish dialogue from the blueprint.

Script Doctor

Scores it, flags issues, sends it back to revise — or passes it.

↻ **Critic** → **Screenwriter revise loop**, hard-bounded by **max_iterations = 2** (loop guard), then finalize.

Mood is authoritative

It governs pace, language and imagery; the director keeps their voice inside it.

Hinglish dialogue, English staging

Hindi-led Roman-script speech; scene descriptions stay in clear English.

Small problem → massive drama

The more ordinary the trigger, the more legendary the conflict — played dead straight.

One voice, narrow agents

Shared context injected once; each agent adds only its own job + JSON schema.

DeepShorts · composable system prompt (base + mood + director) → Architect → Screenwriter → Script Doctor
