

AI Bollywood Script Generator

The user gives a normal real-world situation and the system transforms it into a dramatic Bollywood/Hollywood movie scene with multiple scenes.

Exp:

1. Fight between two founders over putting sugar in coffee
2. Claude Mythos (robot form) entering a AI conference to fight with Sam Alman and Elon Musk

The goal is: “Turn ordinary situations into absurd Bollywood-level drama. 😂”

> You are encouraged to make the experience fun, dramatic, and over-engineered.

Feature List

Mandatory features

- Situation input and showing output on a scene level
- A LLM agent or multi agents which does this.
 - Movie title
 - Tagline
 - Script with multiple scenes
- For every scene there should be a dialogue and scene description and scene index
- Proper Error handling
- Responsive UI
- Showing past generated history (Store it locally)

Bonus Features (optional)

- Show characters cards
 - Name, role, descriptions etc
- Scene Mood Selection
 - A dropdown to select the mood for the drama.
- Regenerate Specific Section
 - Able to regenerate scenes, title etc
- Share a drama card,
 - A sharable public link for this generate drama

Evaluation Metrics

1. Engineering (code, api, reusable component etc stuff)

- a. You can use any coding agent. But you should be able to explain and navigate the code without the agent also.
 - b. It is recommended to have frontend and backend design and not everything in frontend, even if you decide to put agent in the frontend have proper code separation
2. AI Engineering
 - a. Prompt engineering
 - b. Structured output
 - c. Agent handing
3. UX/Product Thinking
 - a. Your creative angle

Expected to be completed in 6-8 hours (with coding agent antigravity/ cursor/ claude/ codex)

Submission

Email the github repo link and the demo video link to sumeet@deepshorts.ai
Subject title: Assignment submission

NOTE: Make sure the repo and the video link are publicly accessible.

Code Submission

- A single public github project link with the complete working compilable code
- The project should be properly structured
- Should have readme with setup, running locally steps clearly mentioned.

Demo video

- A working demo video < 3 min
- If you use any AI for design or code or any assets generation, it is recommended that you describe your approach on using the AI.

AI usages

- You can use grok or openrouter for the demo, they have free credits .
 - <https://openrouter.ai/openai/gpt-oss-120b:free>
 - <https://openrouter.ai/nvidia/nemotron-3-super-120b-a12b:free>
 - <https://openrouter.ai/google/gemma-4-31b-it:free>
- DO NOT COMMIT any keys into the repository. Instead have a .env.example with dummy keys for us to run this project locally.
